

AMENDMENTS TO THE CLAIMS

1 1. (Original) Device for switching on and powering discharge lamps comprising at least a
2 current limiting device, at least a square wave generator, at least an igniter, at least two high
3 tension connection cables, at least a lamp holder with at least a discharge lamp coupled, said at
4 least one igniter comprising at least a high tension transformer and at least an overlapping
5 transformer, said device being characterised in that said at least an igniter is divided into a first
6 stage of the igniter, or pulse generator transformer, and a high tension transformer, and in that
7 said first igniter stage, or pulse generator transformer, and the relevant high tension transformer
8 are assembled along with the above mentioned components.

1 2. (Original) Device for switching on and powering discharge lamps according to
2 claim 1, characterised in that said at least a first stage of the igniter, or pulse generator
3 transformer, is fixed to the lamp holder.

1 3. (Currently Amended) Device for switching on and powering discharge lamps
2 according to claim 1~~[or 2]~~, characterised in that said at least a first stage of the igniter, or pulse
3 generator transformer, integrally moves along with the lamp holder.

1 4. (Currently Amended) Device for switching on and powering discharge lamps
2 according to ~~{one of the preceding claims}~~ claim 1, characterised in that said at least current
3 limiting device module is connected by two reduced section cables with said at least said at least
4 first stage of the igniter, or pulse generator transformer.

1 5. (Original) Device for switching on and powering discharge lamps according to
2 claim 4, characterised in that connection cables between said at least a current limiting device

3 module and said at least a first stage of the igniter, or pulse generator transformer, are be
4 subjected to movement and/or traction.

1 6. (Currently Amended) Device for switching on and powering discharge lamps
2 according to ~~{one of the preceding claims}~~ claim 1, characterised in that said at least a first stage
3 of the igniter, or pulse generator transformer, comprises at least a transformer.

1 7. (Original) Device for switching on and powering discharge lamps according to
2 claim 6, characterised in that said at least a first stage of the igniter, or pulse generator
3 transformer, comprises two transformers.

1 8. (Original) Device for switching on and powering discharge lamps according to
2 claim 6, characterised in that said at least a transformer is comprised of a toroidal core.

1 9. (Original) Device for switching on and powering discharge lamps according to
2 claim 7, characterised in that said two transformers are comprised of two toroidal nuclei.

1 10. (Currently Amended) Device for switching on and powering discharge lamps
2 according to claim 8~~[or 9]~~, characterised in that said at least one transformed comprised of a
3 toroidal core allows a reduction of dimensions, promoting a reducing assembling.

1 11. (Cancelled)
